

Roles and groups

The roles can be determined by the customer.

The following roles and groups were created in the system for the start.

As an administrator you can see which rights which role has and create your own roles.

Roles:

- Worker
 - Minimum role that each user receives
 - Opening the dashboard and custom menus
- Administrator
 - All available rights in Operations
 - E.g. creation and deletion of users
- product manager
 - Creation of projects
 - Adding users
 - Editing projects, worksheets and users
- DevicesService
 - Service user for the device connection (system user)

Application at CUSTOMER:

- Selection of administrators
 - Who should have unrestricted access
 - Few users, usually IT administration
- Selection of product managers
 - Who should be able to create projects and additional users
 - Usually no authorization to delete
 - As a rule, the people from the kickoff
- Worker
 - All users of the APP
 - As a rule, all users of the app
 - All other users

Groups:

Example groups for a customer project:

- APP users
 - Instructions for all users, like first steps in the APP
- ALL users
 - Instructions for all users
- DEVICE users
 - Instructions with device connection
- OPERATIONS Users
 - Users who can access instructions for operations
- EDITOR User
 - Instructions for users of the editor

- Further groups could be e.g. Location_Workspace_Topic to be able to show the instructions only for a certain user group.
- The assignment to the groups is done in the worksheets. There, a group can be assigned to a worksheet. The workflows (worksheets) are then displayed to the respective user.

For the first step, it is sufficient to divide the system into Administrator, Product Manager and Worker.
